

iA: Trusted Service Infrastructure for the UxV Ecosystem

The scaling of autonomous systems across air, surface, ground, and undersea domains is all about operation and execution. Allied defense networks and enterprise buyers face a fragmented, high-risk ecosystem lacking a transparent, unified, and compliant manufacturing base. The market need is clear: U.S. and allied customers increasingly require trusted, transparent, non-PRC supply chains. At the same time, many capable suppliers lack U.S. market access, warehousing, after-sales support, compliance pathways, and secure transaction infrastructure.

iA fills this gap.

iA is a U.S.-anchored industrial infrastructure company for the unmanned systems (UxV) ecosystem. We are explicitly a supplier-agnostic service infrastructure: we fill the critical execution layer between urgent, low-PRC or non-PRC (i.e., Not Chinese made) mission demands and reliable global production. By absorbing execution risks—covering provenance validation, advanced engineering coordination, tactical logistics, and lifecycle sustainment—iA acts as the trusted operating system that transforms components into deployment-ready solutions for democracies. We are not an OEM, ODM, or drone manufacturer. Our supplier-agnostic role is to provide the backend infrastructure the market needs: trusted marketplace access, logistics, RMA, certification support, financing, market intelligence, and AI-native supply-chain coordination.

What We Offer: The Multi-Layer Solution Stack

iA MARKETPLACE – NEW PRODUCT LISTING

Components and Subsystems for All UxV Platforms

AIR			GROUND		WATER					
AIRFRAME & STRUCTURE • Airframes • Structural Components • Materials • Payload Mounts			PROPULSION SYSTEM • Motors & ESCs • Propellers • Engines • Power Systems		COMMUNICATION SUBSYSTEM • RF Modules & Transceivers • Antennas & RF Front Ends • Space-Ground Links • Space-UxV Links • LEO / NTN Connectivity • Communication Modules • Communication Subsystems		SENSORS & PAYLOADS • EO/IR Cameras • LiDAR • Radar • Sonar • Multi-Sensor Payloads		POWER & ENERGY SYSTEMS • Batteries & BMS • Power Modules • Power Distribution • Energy Management	
AI CHIPSETS & PROCESSING MODULES • AI Chipsets • Edge AI Modules • AIoT Solutions • Digital Processing Systems			FLIGHT CONTROL, NAVIGATION & AVIONICS • Flight Control Systems • Autopilots • Navigation Systems (GNSS/INS) • Avionics Modules		COMPUTE & DATA SYSTEMS • Onboard Computers • Data Recorders • Storage Solutions • Mission Computing Systems		MOBILITY & MECHANICAL SYSTEMS • Actuators & Servo Systems • Gimbals & Stabilization • Landing Gear • Drive Systems & Mechanisms		TEST, INTEGRATION & SUPPORT • Test & Measurement • Integration Components • Ground Control Systems • Support Equipment & Tools	
Trusted Suppliers Verified Quality			Curated Products For All UxV Platforms		Global Coverage Air • Ground • Water • Space		Advanced Technologies For Mission Success			

Trusted and Curated Marketplace

A full-service marketplace for low-/non-PRC components, subsystems, and UxV solutions, helping verified buyers identify qualified suppliers and helping suppliers access U.S. and allied demand. We are IN BUSINESS today. We have onboard >50+ businesses and 100+ products across 8 verified product categories online. The marketplace partner has been awarded an IDIQ with the U.S. Department of War, reinforcing its credibility as a trusted transaction platform for government and defense-related demand. New Expansions in AI chips, ASICs, satellite communication modules, NTN/LEO-related connectivity based in buyer and supplier initiatives now open for marketplace.

Complete Operation and Logistics

U.S.-based warehousing, inventory management, testing, assembly, fulfillment, RMA, reverse logistics, battery/hazmat handling, Foreign-Trade Zone (FTZ)-related support, and potential manufacturing support through partners. We anticipate testing a fully integrated and AI-enabled platform in August 2026, with continued onboarding of buyers, suppliers, and product categories through Q3.

Market Intelligence

Tracking and aggregating non-governmental, U.S. federal, state, county, and city-level RFIs, RFPs, pilots, public safety needs, defense opportunities, infrastructure programs, and low-altitude economy demand.

Deep-Tier Financial and Transaction Layer

Secure cross-border payments, supplier/buyer verification, financing support, escrow-style transaction flows, as well as potential revenue-sharing, JV, or strategic partnership structures.

AI-Native Supply Intelligence (The Data Spine)

Connecting supplier data, demand signals, inventory, records, readiness requirements, and field intelligence from global markets (e.g., the U.S. and Ukraine) to support better matching, forecasting, compliance screening, and stockpile planning.

Why Work with iA

- For suppliers, iA provides a practical path into the U.S. and allied markets.
- For buyers, we provide trusted sourcing, operational readiness, and lifecycle support.
- For partners, we provide a scalable platform to serve the next generation of trusted autonomous systems.
